Read the following passage and answer the questions given below. Some words are highlighted to help you answer some of the questions. United States Secretary of the Treasury Janet L. Yellen's proposal for global coordination of corporate taxation has huge implications. She has proposed a global minimum tax rate. If the major world economies agree and the U.S. Congress approves the increased tax rates, it would constitute a reversal of the trend in tax policies since the collapse of the Soviet Bloc 30 years back. Would Ms. Yellen succeed in convincing OECD countries and the U.S. Congress? David R. Malpass, President of the World Bank, representing the interest of global capital, has voiced his opposition. He was shooting from the shoulders of the poor countries when he said the proposal "...would hinder poor countries' ability to attract investment". The initiative which has been long overdue is being forced on the rich countries by the impact of the pandemic. Presently, governments need resources to help people through the transfer of incomes, provision of more public services and also prevent business failures. But their resources have been _____ (I) _____ impacted by the economic downturn. Consequently, fiscal deficits have reached record-high levels. In the pre-pandemic era, such levels of the deficit would have led to the tanking of the stock markets but now they are booming in anticipation of demand being pumped in by these high deficits. The result is a massive increase in inequality between those who have gained in the stock markets and those who have lost employment and incomes. Additional tax collections can help reduce these large fiscal deficits and that is the reason for the U.S. administration's current proposal. But businesses and conservative legislators will resist. However, some rich Americans like Jeff Bezos have supported the idea of taxing the rich more. Such proposals have been around since 2011 when many of the rich in the U.S. and Europe had supported higher taxation on the rich. Subsequently, this proposal has come up several times. When the Soviet Bloc collapsed in 1990, nations in eastern Europe were badly hit and needed capital infusion to overcome their economic woes. To attract global capital, they cut their tax rates sharply. This resulted in a 'race to the bottom'. Nations in Europe were forced to cut their tax rates one after the other to not only attract capital but also to prevent capital from leaving their shores. This had global implications. Nations became short of resources and cut back expenditures on public services and encouraged privatization. Governments lacked resources for education, health and civic amenities.

71. What was the stance of the World Bank President in light of the proposal?

- (b) There is a lack of cohesion amongst administrative authorities.

- (d) Only

73. What is/are the consequence(s) of increased fiscal deficits?

- (c) A rise in the number of public services offered and the prevention of economic failures.
