Read the following passage and answer the given questions. Colonel Arvind Mehta had spent thirty-two years commanding men across mountain passes and desert frontiers before the sea claimed his imagination entirely. Retirement, rather than slowing him down, had redirected his disciplined energy toward an altogether different kind of mission. Within a year of hanging up his uniform, he had enrolled in an advanced oceanography programme at a coastal research institute, driven by a conviction that the world _____ the ocean surface remained one of the last genuinely unexplored frontiers available to a curious and determined mind. It was during this programme that he met Dr. Samuel Okafor, a Nigerian marine scientist with a quiet brilliance and an infectious enthusiasm for deep-sea ecosystems. The two men, separated by decades of different life experiences yet united by a shared obsession with the unknown, formed an unlikely but highly effective partnership. Their friendship deepened over shared meals, late-night research discussions, and a mutual frustration with how little attention policymakers paid to the health of the world's oceans. Together, they designed an ambitious experiment aimed at studying bioluminescent organisms living at extreme ocean depths ? creatures that produce their own light in an environment where sunlight never reaches. Securing funding and institutional support took two exhausting years, but Colonel Mehta's persistence, sharpened by decades of military planning, eventually prevailed. The duo boarded a specialised marine research vessel equipped with remotely operated underwater vehicles and a pressure-resistant sampling chamber capable of descending four thousand metres below the surface. The experiment was designed to enable scientists to collect living bioluminescent specimens without exposing them to pressure changes that would destroy their cellular structure ? a technical challenge that had defeated previous research attempts. Critically, the team was determined not to exploit the fragile deep-sea environment beyond what minimal scientific sampling required, embedding strict ecological protocols into every stage of their methodology. Three weeks into the voyage, their equipment captured footage of an entirely unknown species glowing in absolute darkness ? a discovery that could reshape the world's understanding of deep-sea life.

36. What does the passage suggest about Colonel Arvind Mehta's transition to civilian life and oceanography? why curiosity at any age remains worth following.
- (a) He pursued oceanography reluctantly after failing to find other suitable post-retirement opportunities
 - (b) He enrolled in the programme primarily to reconnect with Dr. Okafor whom he had met during military service
 - (c) Retirement caused him significant psychological distress that oceanography helped him gradually overcome
 - (d) His disciplined military background was redirected productively toward a new intellectual pursuit driven by genuine curiosity
 - (e) His interest in oceans developed only after completing the advanced oceanography programme at the institute Ans.(d)

37. According to the passage, what made the experiment designed by Colonel Mehta and Dr. Okafor particularly challenging?

- (a) Securing a research vessel capable of travelling to remote oceanic locations within a limited budget
- (b) Collecting living bioluminescent specimens without subjecting them to pressure changes that would destroy their cellular structure
- (c) Convincing policymakers to fund research into deep-sea ecosystems that had already been extensively studied
- (d) Identifying the precise ocean location where bioluminescent organisms were most densely concentrated
- (e) Training crew members to operate remotely controlled underwater vehicles at extreme ocean depths safely Ans.(b)

38. Which of the following statements is/are correct according to the passage? (I) Colonel Mehta and Dr. Okafor shared a mutual frustration about inadequate policymaker attention toward ocean health.
