Read the following passage and answer the given questions. In recent years, China's economy has expanded rapidly, with consumer spending playing a pivotal role. From groceries to luxury items, nearly every purchase now passes through digital payment gateways such as Alipay and WeChat Pay. These platforms have revolutionized the financial landscape, providing convenience and speed. However, beneath this innovation lies a growing concern: the overcharging practices of these payment firms. Merchants across sectors have complained that the transaction fees are often higher than advertised. Small firms, in particular, feel the burden, as they rely heavily on digital payments to stay competitive in a market where cash is steadily declining. Many local businesses, unable to bear the pressure of mounting costs, have folded within months of adopting these systems. This _____ how dependence on a few gateways can distort fair competition. A recent report highlights that while international credit card companies charge between 1% and 3% per transaction, some Chinese gateways impose hidden charges that push the effective rate even higher. The issue is not just about percentages; merchants also face delays in settlement, mandatory promotional tie-ins, and penalties for using alternative platforms. These tactics create an environment where firms have little choice but to comply. Interestingly, consumers remain largely unaware of the scale of overcharging because the extra costs are often folded into the final prices of goods and services. In a way, the weather of the broader economy's rising inflation, slowing exports, and unpredictable growth makes these charges even harder to digest. Instead of encouraging financial freedom, these practices contribute to a sense of dependency on a few dominant players. Observers warn that if unchecked, this trend could harm innovation in the long run. The monopolistic grip of payment giants not only squeezes small firms but also discourages new entrants from experimenting with alternative solutions. Unless greater transparency and regulatory oversight are introduced, the promise of a seamless digital economy may end up costing more than it delivers.

40. What is the central irony described in the passage regarding digital payment gateways in China?

- (a) Consumers believe digital platforms are free, though they are highly profitable.
(b) Platforms intended to help small merchants are instead contributing to their collapse.
(c) China developed digital payment systems for rural areas but they are only used in cities.
(d) Regulatory authorities fail to notice the dominance of platforms like Alipay and WeChat Pay.
(e) Consumers benefit more than merchants due to government subsidies on transactions.
-

41. How does the overall state of the economy affect the problems caused by digital payment platforms, according to the passage?

- (a) It helps small merchants adapt faster to digital systems.
(b) It makes overcharging practices more acceptable to the public.
(c) It increases the burden of overcharging due to financial pressures like inflation.
(d) It incentivizes payment firms to reduce fees.
(e) It drives consumers away from digital platforms.
-

42. Which of the following statements can be inferred to be TRUE based on the passage? (I) Digital payment systems were initially perceived as tools to improve financial accessibility.
