Also ?A? turned left from point S and reached point M after walking 5 km. M is in west direction from J.

8. What is the shortest distance between points M and J?

- (a) 10 km
- (b) 26 km
- (c) 18 km
- (d) 12 km
- (e) Cannot be Determined

9. If ?B? walks 4 km east from point Y, then he is in which direction with respect to point D?

- (a) South
- (b) North-west
- (c) North-east
- (d) North
- (e) South-west

10. What is the shortest distance between points Q and D?

- (a) ?194 km
- (b) ?198 km
- (c) ?197 km
- (d) ?196 km
- (e) ?195 km

11. What is the direction of J with respect to Q?

- (a) South
- (b) North-west
- (c) North-east
- (d) North
- (e) South-west

Each of the questions given below consists of a question and two statements numbered I and II. You have to decide whether the data provided in the statements are sufficient to answer the question. (a) If statement I alone is sufficient to answer the question, but statement II alone is not sufficient to answer the question. (b) If statement II alone is sufficient to answer the question, but statement I alone is not sufficient to answer the question. (c) If statement either I or II is sufficient to answer the question. (d) If both the statements I and II taken together are not sufficient to answer the question. (e) If both the statements I and II taken together are sufficient to answer the question.

- (e) 6 :11 ITeS fell from 20.8 per cent in 2012-13 to 14.9 per cent in 2014-15 and to a low of 7.3 per cent in 2015-16. Global circumstances combined with the specific nature of India's IT prowess seem to be responsible for this fall. India's IT industry recorded remarkable growth over a long period because it exploited an outsourcing opportunity by perfecting a global delivery model for software and ITeS based on cheap skilled labour. That opportunity was offered by the cost-cutting imperatives facing the corporate sector in the United States and elsewhere. As a result, IT industry revenues grew in double digits, with export earnings accounting for a large share of those revenues. Employment grew rapidly, albeit from a low base and at a lower pace than revenues. And a service industry to support the IT sector's growth grew around the principal centres of its activity, suggesting that despite the absence of physical production the sector had backward linkages through which it delivered some economy-wide benefits. This combination of the characteristics of India's IT success not only gave the industry a position of privilege in the economy but made it the symbol of India's ostensible post-globalisation success. However, there were a number of features of that model that made it vulnerable to changes in circumstances. To start with, it had a high degree of dependence on exports for growth, with the U.S. accounting for a very large share of those exports, followed by the European Union (E.U.) at a distant second. At the turn of the century, the U.S. market accounted for close to two-thirds of India's IT exports and the E.U. for about a quarter, and even in 2015-16, the U.S. was first with 62 per cent and Europe second with 24 per cent. Little had changed for the industry. Secondly, software services (or code writing and customisation of different levels of sophistication) and ITeS, rather than IT products, accounted for an overwhelming share of revenues. To garner those revenues, a workforce with essential IT skills and familiarity with English, communication infrastructure, and the requisite organisation were the necessary ingredients. But sustaining those revenues required constant attention to cost competitiveness, which encouraged automation of the routine activities that constitute an important part of the industry's operations. Thirdly, this output composition required combining offshore delivery with local services provision to understand client requirements and customize services and even run operations. So, on-site work remained an important component of the industry's activity. In 2002-03, 48 per cent of India's exports of IT services was through the medium of a commercial presence on foreign soil and another 13.5 per cent through the presence of natural persons. By 2015-16 those figures had come down to 18.9 per cent and 16.1 per cent respectively. But the local presence, which ensured provision of 35 per cent of the value services that had risen in value from Rs.31,100 crore to Rs.5,76,310 crore between 2002-03 and 2015-16, was undoubtedly large and crucial to the industry's performance. Finally, a few firms (such as Tata Consultancy Services (TCS), Infosys and Wipro) account for a very large share of the industry's revenues, drawing attention to their operations and as happened in the U.S. recently.

Read the following passage carefully and answer the questions given below it. Certain words are given in bold to help you locate them while answering some of the questions. There is a sense of gloom pervading India's \$150-billion information technology (IT) industry, which earned India \$88 billion in foreign exchange in 2015-16 through the exports of software and IT-enabled services (ITeS). According to data from the Reserve Bank of India (RBI), the rate of growth of the combined exports of software and ENGLISH LANGUAGE September and October. The ratio of chair, tables and wardrobes sold by A in August is 42 : 36 : 23 while ratio of chairs sold by A in August, September and October is 14 : 23 : 27. Wardrobes sold by A in August is 230 less than chairs sold in September by A. In September 665 chairs, 400 tables and 210 wardrobes were sold by two companies together. B sold same number of chairs in Aug and September. Number of tables sold by company B in September was equal to number of chairs sold by A in August while number of wardrobes sold by A in August and B in September were equal. Company B sold total 1025 chairs in these three months together which was 480 more than total number of tables sold by A. Ratio of tables sold by A and B in August is 12 : 11 and in October is 35 : 38 respectively. Total number of items sold in August was 1075. Total number of wardrobes sold by A in October was 35 less than wardrobe sold by B in October, while sum of wardrobe sold by A and B in October is 205. 76. - (d) Both (II) and (III) are true

(e) All are true Agriculture in India has been facing many issues ? fragmented land holding, depleting water table levels, deteriorating soil quality, rising input costs, low productivity. Add to this vagaries of the monsoon. Output prices may not be remunerative. Farmers are often forced to borrow to manage expenses. Also, many small farmers not eligible for bank credit borrow at exorbitant interest rates from private sources. When nature rides roughshod over debt-ridden farmers in the form of erratic monsoon and crop failures, they face grim options. Indebtedness is a key reason for the many farmer suicides in the country. Loan waivers provide some relief to farmers in such situations, but there are debates about the long-term effectiveness of the measure. Critics demand making agriculture sustainable by reducing inefficiencies, increasing income, reducing costs and providing protection through insurance schemes. They point out that farm loan waivers are at best a temporary solution and entail a moral hazard ? even those who can afford to pay may not, in the expectation of a waiver. Such measures can erode credit discipline and may make banks wary of lending to farmers in the future. It also makes a sharp dent in the finances of the government that finances the write-off. A blanket waiver scheme is detrimental to the development of credit markets. Repeated debt-waiver programmes distort households' incentive structures, away from productive investments and towards unproductive consumption and wilful defaults. These wilful defaults, in turn, are likely to disrupt the functioning of the entire credit system. The real crisis for Indian farmer is that he or she is not in control of the produce, unlike other businesses, and is dependent on cartel of traders to fetch a decent price. The cartel makes money in case of good or bad crop season as their margins remain intact. In fact, in case of a crop failure the trader profit margin rises whereas the farmer is in distress without remunerative price. The governments ? Centre and states ? have repeatedly failed to break the cartelisation and their effort to create farm infrastructure through cold stores has helped the corporate sector more than the farmers. Except some farmers in Maharashtra and Punjab, most of the cold stores built with help of the government subsidy are owned by corporates. So, now these corporates are buying produce in farms at cheap rates, keep them in cold stores, repackage them and sell them in malls in cities at thrice the purchase price. Neither the farmer gains nor the consumer. To be sure, the agriculture sector needs government support but loan waivers are not the solution. On the contrary, expenditure on loan waivers will eventually leave less fiscal space for public expenditure in agriculture. India needs massive investment in areas such as irrigation, water

Read the following passage carefully and answer the questions given below it. Recent events ? the UP government?s waiver of farmer loans, dramatic protests by Tamil Nadu farmers in Delhi and a warning from the RBI Governor against loan waivers ? have once again brought farm loan write-offs under public glare. Farm loans may be crop loans or investment loans taken to buy equipment. Both farmers and banks reap a good harvest when all is well. But when there is a poor monsoon or natural calamity, farmers may be unable to repay loans. The rural distress in such situations often prompts States or the Centre to offer relief ? reduction or complete waiver of loans. Essentially, the Centre or States take over the liability of farmers and repay the banks. Waivers are usually selective ? only certain loan types, categories of farmers or loan sources may qualify. solutions. Loan waivers will only end up complicating the problem. The Indian economy has suffered a lot due to competitive populism in the past. It?s time parties and governments address the real issues.

If the highlighted portion does not require any replacement, choose option (e) i.e. ?No replacement required? as your answer. The British ruled India only on the strength of the British Indian army (116) is likely to be reflected in the quality of work too. Without this army, the British could never hold together, ?the jewel in the crown? and exploit its resources. Smartly, the British had raised the army on communal lines with regiments based on castes and (117) communities to perpetuate feudal feelings and prevent the development of a national consciousness. Netaji Subhas Bose realizing this raised an Indian National Army (INA) which had men of all castes and communities in mixed regiments and (118) who made them leave India in a hurry. The poorly equipped INA men (recruited in South-East Asia from Indian prisoners of war) (119) were the real heroes whom led India to freedom. 26,000 of the 60,000 INA soldiers perished on the battlefield. Being with the Axis Powers, they were on the losing side in World War II. Netaji disappeared after the conclusion of the World War and (120) what happened to him thereafter remains a matter of conjecture ? albeit it is now proven that no air crash in which he is supposed to have died ever took place.
