Read the following passage and answer the following questions based on the passage. Some words are highlighted to help you answer some of the questions. The collaboration of different stakeholders in the banking system, improving customer experience, and having a significant impact on return on investment (RoI) are some of the keys to the growth of digital banking in India, said bankers and experts at the Mint Annual Banking Conclave 2019. The discussion was moderated by Mint's national technology editor, Leslie D'Monte. "The most simplistic way to look at experimentation is to see whether it increases revenue or decreases cost. You can add customer experience to this and see whether it leads to one of the two. That is a strong way of justifying any new technology and experimentation," said Nitin Chugh, country head (digital banking) at HDFC Bank Ltd. Technology such as artificial intelligence (AI), machine learning and the internet of things, has made its way into digital banking. However, banks are raising more relevant questions now. "While technology is exciting, banks have found the right balance behind the romance of technology, where they are asking what technology has done for the business. They are questioning which area, and where do you apply it? That maturity has set in," said Deepak Sharma, chief digital officer, Kotak Mahindra Bank Ltd. Banks are willing to experiment within a given framework to achieve higher RoI, but they can start defining RoI much more quickly with regard to AI, said Hemant Adarkar, Technologist, Nainital Bank Ltd (Bank of Baroda). "There are programmes where banks are working with fintechs, where KYC (know-your-customer) documents can be scanned and the software knows whether it is a passport or Aadhaar card or driving licence. The turnaround time for lending can be reduced and, thus, AI is very close to maturing in the Indian context," he added. Banks, especially payment banks, have to adopt a "phygital" model, which provides the best of physical and digital services to its consumers, according to the panellists. "We believe that the next population will move to banks through the digital model," said Rishi Gupta, managing director (MD) and chief executive officer, Fino Payments Bank. "When we set up the bank, technology was a given. In today's banks, we cannot think of a bank without investing in tech. It is the largest investment on a year-on-year basis. But, if it is purely digital, there will be issues because even regulations say an ombudsman is needed in every district. You need the touch and feel. So, we built up a huge merchant network, more than 1 lakh, and our transaction value has tripled in 18 months," he said. Banks also need to collaborate across the chain of transactions with different players in the industry. "Banks focus on how to collaborate with different players in the industry. Because from a customer point of view, banks are not servicing the full need. I want to buy something and the bank is helping in one part of it. Collaboration across the entire ecosystem needs to be looked at," said Kunal Pande, partner (advisory services) at KPMG India. Banks are also trying to understand how to capture the latest innovations without separating the business and technology, industry experts said. "What banks are providing today is just the continuation of what it was 50 years ago. But, what we see in China is that all banking routes are getting disrupted ground up. People are no longer talking about banks offering statements. What is interesting about China is how it embedded the day-to-day solutions in your life. People make payments on WeChat, which only started as a communication platform," said Sudhir Tiwari, MD (India) at ThoughtWorks.
